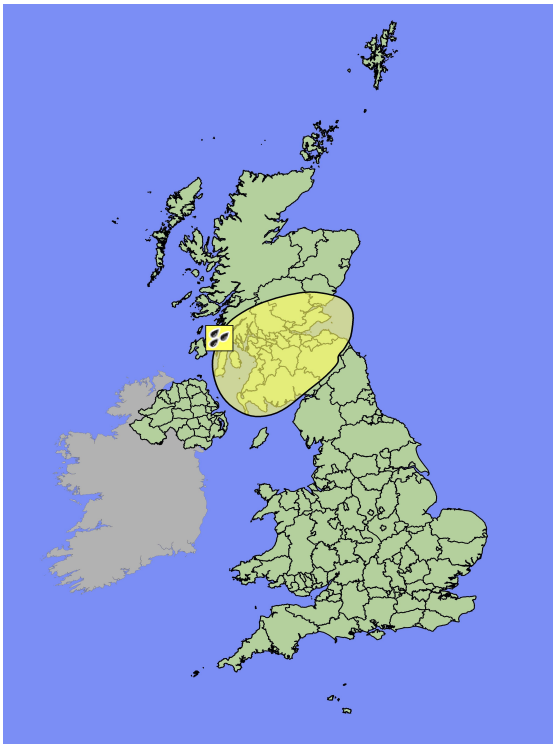
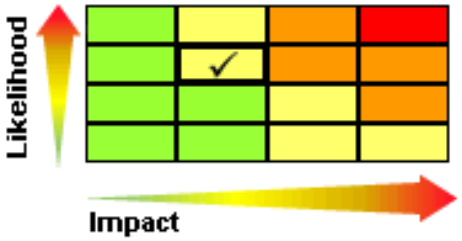
# National Severe Weather Warning Service





**Chief Forecasters Assessment**
The depression that has been bringing very wet weather across central Scotland is now moving away eastwards over the North Sea. Meanwhile the associated frontal zone left stranded across Scotland will begin to move erratically southwards into southern Scotland this evening bringing further rain which may be heavy at times. A further 10-15 mm of rain is likely locally, which may add to existing problems.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **18:00 on Wed, 18th Jul 2012** until **23:55 on Wed, 18th Jul 2012**

The area of heavy rain that has been affecting central Scotland through today will begin to move southwards into southern Scotland this evening whilst easing from the north.

The public should be aware of the risk of further localised flooding and poor driving conditions at times.
